

Utilization of ISO 9001 Principles as a Model for Community Cooperation in Establishing an Anticoagulation Clinic

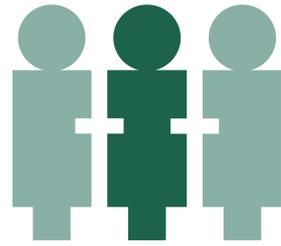

Kirkwood Community College
Lead Organization

James M. Levett, M.D.
Principal Investigator
Physicians' Clinic of Iowa
Cedar Rapids, Iowa

Working Together for Patient Safety.

Partnerships in Implementing
Patient Safety RFA
Grant No: U18 HS15830-01

Cedar Rapids
Healthcare
Alliance

Working Together for Patient Safety.

Vision:

To create a community model of care delivery and patient safety using ISO 9001 principles as a quality framework for cooperation.

Immediate Objective:

The project partners have established a community anticoagulation clinic (CAT Clinic) to facilitate management of patients on warfarin and to promote the continual improvement of healthcare within our community.

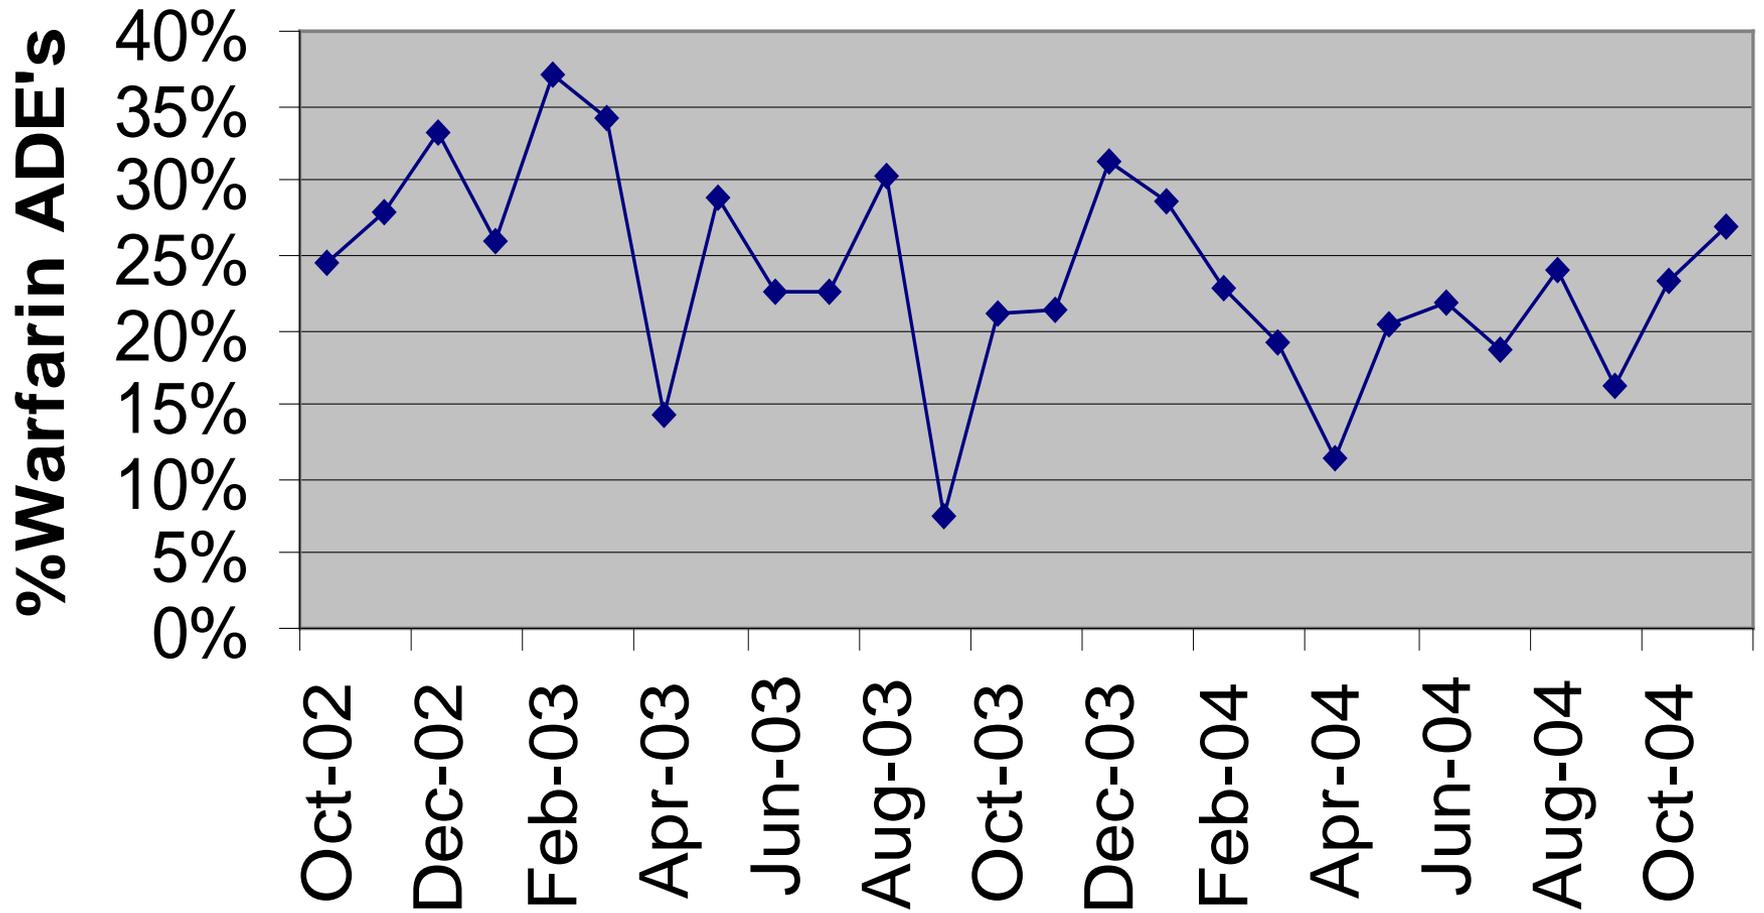

Overview

- What we hope to accomplish
- Background of ISO 9001
- Review of first year activities

Hypothesis

ISO 9001 quality principles can serve as a **framework to develop a system of care** that will improve communication, facilitate establishment of care pathways and safe practice interventions, and enhance the continuity of patient care in our community.

A Community Partnership

Grant Partners

- **Cardiologists, P.C.**
- **Cedar Rapids PHO**
- **Delta Group**
- **Iowa Quality Center**
- **Iowa Healthcare Collaborative**
- **Iowa Health Information Project**
- **Kirkwood Community College**
- **Linn County Medical Society**
- **Mercy Medical Center**
- **Physicians' Clinic of Iowa**
- **Rockwell Collins**
- **St. Luke's Hospital**
- **United Heart Associates**
- **Wellmark Blue Cross/Blue Shield and Foundation**

Cedar Rapids Healthcare Alliance

- Not-for-profit corporation
- Seeking 501(c)(3) designation
- Potential Patient Safety Organization (PSO)
- Framework for Regional Health Information Organization (RHIO)

Working Together for Patient Safety.

What is ISO 9001?

International Organization of Standardization

- ISO 9001 and other quality standards are developed and controlled by this organization
- “ISO” means:
“equal standards throughout the world”

ISO 9000 Quality Standards

- Technical specifications initially
- Generic management system standards later
- ISO 9000 family developed in 1987
- Revised in 1994 and 2000
- Can be used across all types of organizations, including healthcare
- Organizations are certified to the ISO 9001 requirements

ISO 9001 Requirements

- Based on eight quality management principles
- Suggest the use of a process approach in developing the Quality System
- Designed to increase customer/patient satisfaction
- Requires continuous improvement

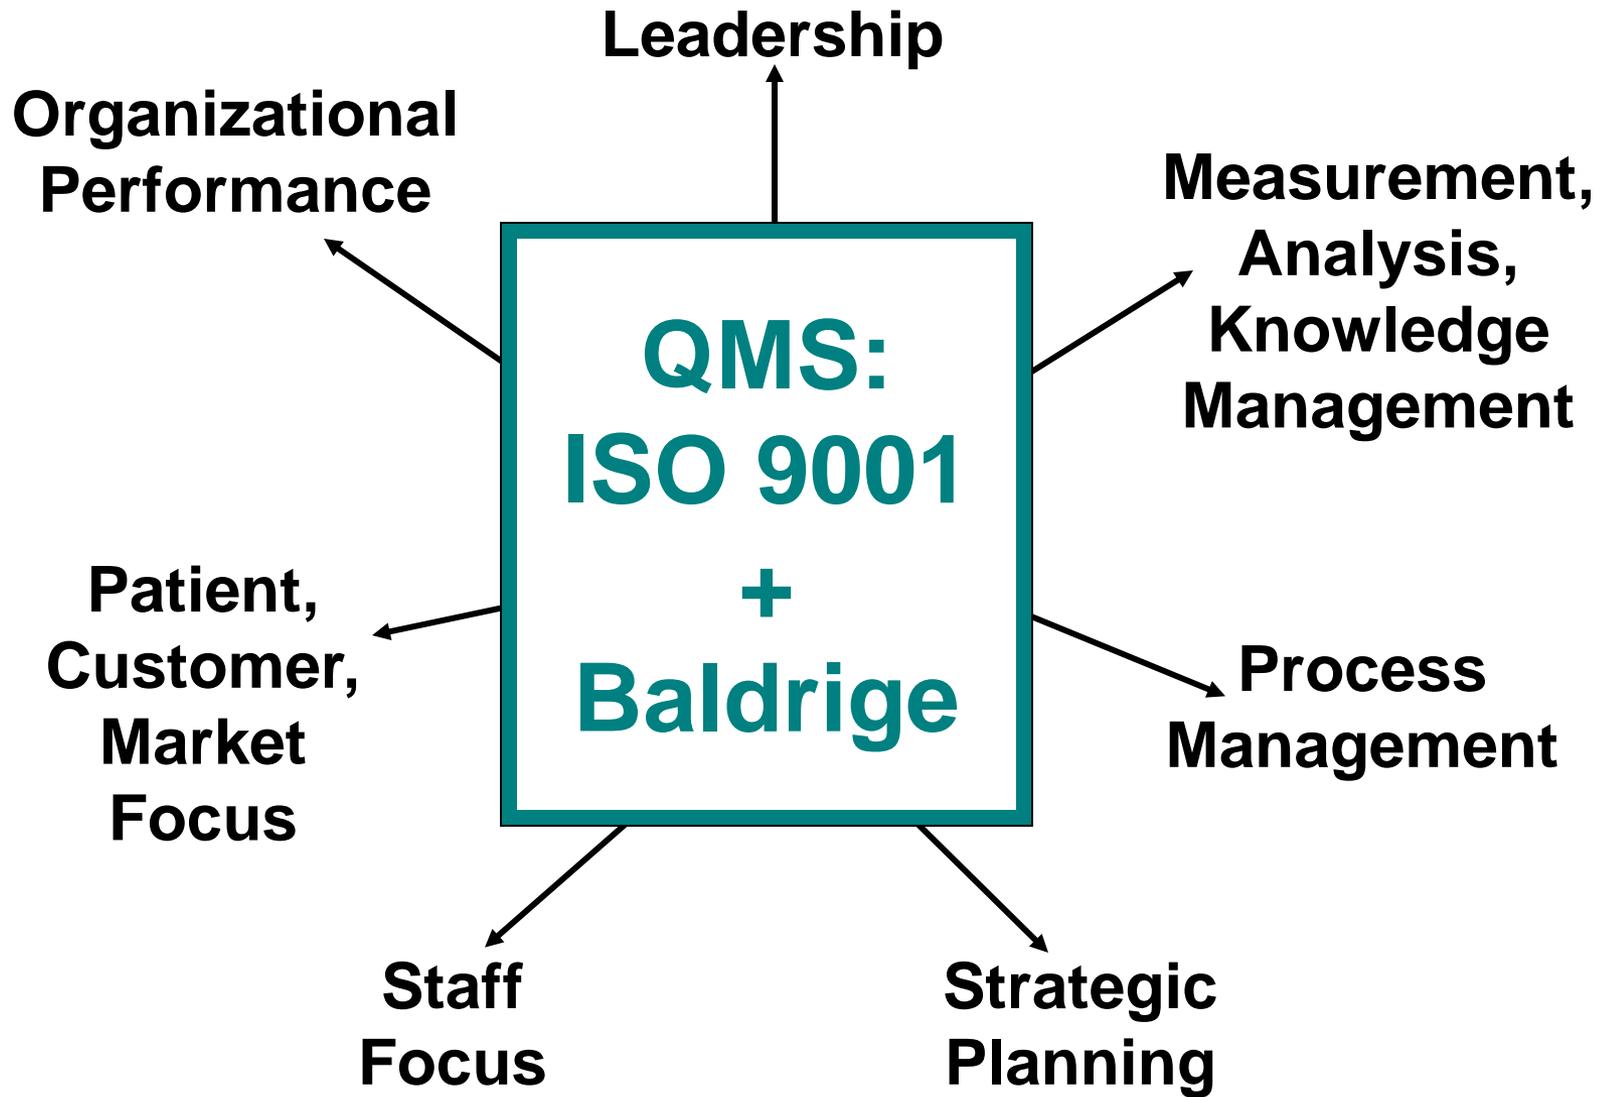

Quality Management Systems

National Baldrige Award

- Strategic Planning
- Leadership
- Focus on Customers, Markets
- Measurement, Analysis & Knowledge Management
- Staff Focus
- Process Management
- Performance Results

ISO 9001

- Customer Focus
- Leadership
- Involvement of People
- Process Approach
- System Approach to Management
- Continuous Improvement
- Decision-Making on Facts
- Mutually Beneficial Supplier Relationships

QMS: Structure

Quality Management System

Community Framework for ISO 9001

Applicable ISO Principles

- Auditing, internal and external
- Corrective and preventive action plans
- Document system, controlled and shared

Example of Shared Documents

Inpatient	Anticoagulation record
Outpatient	Anticoagulation guidelines/protocols
Transition	Inpatient to outpatient

Teams

- Clinic Evaluation and Process Mapping
- Health Literacy
- Hospital Coordination Team
- Management
- Metrics

Teams

- Patient Educational Material Development
- Survey
- Tool Kit
- Training Design and Evaluation
- Web Design

Process Metrics

- Number of dose changes
- Number of times physician contacted
- Incidence of values outside protocol
- Length of time on warfarin therapy
- Number of corrective action plans
- Time in therapeutic range

Outcome Metrics

- Reduction in patient complications and readmissions related to bleeding, thromboembolic events, and adverse drug events
- Risk profile of patients developing complications
- Reduction in deaths
- Reduction in length of time on warfarin, number of dosage changes, and improved patient time in therapeutic ranges
- Reduction in missed lab reports

Outcome Metrics

- Clinically Adjusted Charge/Cost & LOS
 - *Reporting Variables: Service Line, DRG, Physician, Diagnosis, Procedure, Trending*
 - *Including ICD-9 codes used in risk assessment: Adverse Effects of Anticoagulation (E934.2) and Abnormal Coagulation Profile, (790.92).*
- Risk Adjusted Complications, Mortality, Readmissions
 - *Reporting Variables: Service Line, DRG, Physician, Trending*
- Clinically Adjusted Episodes of Care
 - *Reporting Variables: Major Practice Category, ETG, Physician, Trends, Office Processes, CPT-4 Codes, NDC Codes*

Tools: Anticoagulation Clinic

- ***Process patient flow chart:*** This flow chart documents the overall process and protocols for patient care in the clinic.
- ***Risk assessment form:*** This form will record risk factors of patients on warfarin therapy.
- ***Clinical risk assessment tool:*** This tool will characterize and profile patients at risk for adverse outcomes. The tool will describe patient characteristics related to complications, particularly in the elderly population served.

Tools: ISO 9001

- ***ISO 9001 Healthcare Leadership Program:*** Course materials, guides, and a PowerPoint® presentation, delivered in four, two-hour training sessions.
- ***ISO 9001 Basic Training:*** Curriculum, guides and a PowerPoint® presentation, delivered in three, four-hour training sessions.
- ***ISO 9001 Internal Auditor Training:*** Curriculum and guides, delivered during a three-day training session.

Database and Website

- Access clinic database
- Clinic website
- Link data input from labs

Health Literacy

- Teaching materials
- Work with local senior center to validate material
- Application in clinic setting

Results of Grant Process

- Establish anticoagulation clinic
- Establish partnerships within community
- Improve communication
- Provide improved patient care
- Utilize ISO concepts within the community of healthcare providers

Results of Grant Process

- ***Establish legitimacy of the quality system***
- Establish the concept as a community model
- Develop long-term sustainability for clinic
- Develop tools and report our experience
